

1310nm RF modulated DFB laser 10GHz

● Product Description

Microwave distributed feedback (DFB) lasers provide exceptional performance for linear fiber communications in very wide bandwidth applications. The ML1001 linear fiber lasers are a good choice for transmitting 10MHz to 18GHz signals using coaxial cable systems. They greatly improve the reliability of microwave communication networks by transmitting RF signals in pristine format. Due to these superior characteristics, our laser products provide significantly improved high signal quality for a wide range of applications including antenna remote control, telemetry, timing and reference signal distribution, measurement and delay lines, etc.
