

# 900-2700nm InGaAs photodiode

## Two-stage TEC cooling Φ2mm

### ● Product Description

The GESTIN-2TE-TO8 series unit InGaAs detector is mainly composed of a P-I-N structure InGaAs photosensitive chip, a transition electrode plate, a temperature sensor and a two-stage thermoelectric cooler (2TE), and adopts a TO package. This user manual only introduces the product series.

### ● Part Number

GESTIN-2TE-TO8-2000

## ● Product features

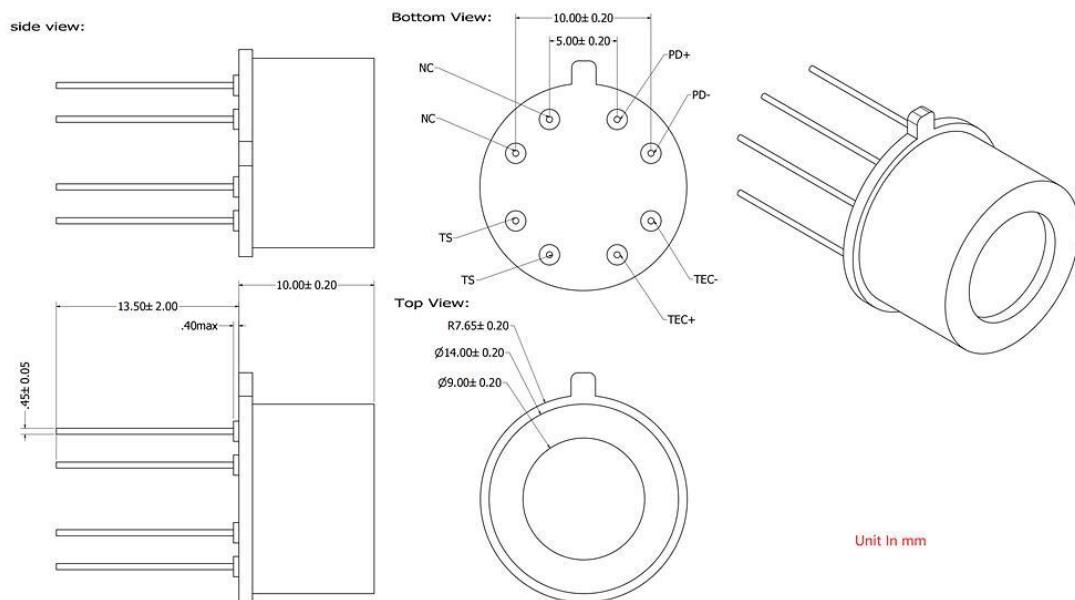

Chip effective diameter from 300μm to 3000μm、Spectral response from 900nm to 2700nm、High shunt resistance for high sensitivity、TEC built-in

## ● Application area

Near infrared sensing/radiometry、LED/LD characteristics、Spectroscopy、Medical diagnostics、Spectroscopy

## Parameters

### Dimensional Drawing

### Main Parameters:

#### E/O characteristics

#### Structural parameters

Part Number	Package	cool	Active area	Chip size	Electrode size
GESTIN-2TE-T08 -0300			Φ 300 μ m	850×850um	140×180um
GESTIN-2TE-T08 -0500			Φ 500 μ m	1000×1000um	140×180um

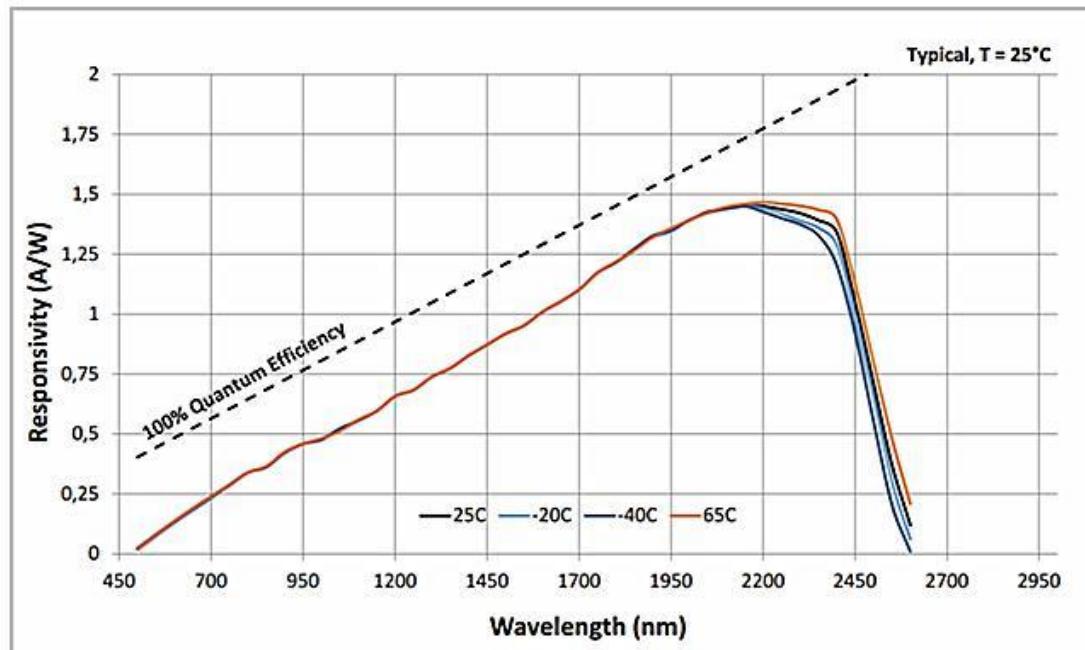

GESTIN-2TE-T08 -1000	TO-8	2TE	$\Phi 1000 \mu m$	1410 × 1410um	140 × 180um
GESTIN-2TE-T08 -2000			$\Phi 2000 \mu m$	2560 × 2560um	280 × 360um
GESTIN-2TE-T08 -3000			$\Phi 3000 \mu m$	3560 × 3560um	320 × 480um

### EO parameters

Part Number	Test temperature Tch (°C)	Spectral response λ (nm)	Dark Current ID( μ A)		Junction Capacitance C(f=1M Hz , VR =0V) (pF)
			VR =0.01V	VR =0.5V	
GESTIN-2TE -T08-0300	25	900-2700	0.1	0.5	50
GESTIN-2TE -T08-0500			0.2	1	100
GESTIN-2TE -T08-1000			1	4	300
GESTIN-2TE -T08-2000			4	10	800
GESTIN-2TE -T08-3000			10	40	2000

Part Number	Peak response (A/W)	Junction impedance Rsh(VR =10mV) M Ω	Peak detection rateD*(cm • Hz <sup>1/2</sup> /W)		Noise Equivalent Power NE P (W/Hz <sup>1/2</sup> )
			D*	(cm • Hz <sup>1/2</sup> /W)	
GESTIN-2TE-T08 -0300	1	3500	3 × 10 <sup>12</sup>		8.9 × 10 <sup>-15</sup>
GESTIN-2TE-T08 -0500		1000			1.5 × 10 <sup>-14</sup>
GESTIN-2TE-T08 -1000		300			3.0 × 10 <sup>-14</sup>
GESTIN-2TE-T08 -2000		80			5.9 × 10 <sup>-14</sup>
GESTIN-2TE-T08 -3000		40			8.9 × 10 <sup>-14</sup>

## Response Curve

### TEC parameters

#### Operating environment

Parameter	Typ
Operating temperature (°C)	-45~ +55
Storage temperature (°C)	-50~ +60

#### Characteristics of Thermoelectric Cooler

The detector integrates a two-stage thermoelectric cooler (TEC). The center of the cooling surface is the center of the lower surface of the detector. The cooling area should be  $\geqslant 6\text{mm} \times 6\text{mm}$ . Its performance parameters are shown in the following table:

Performance indicators	Value
Max. thermal load power ( $Q_{\max}/\text{W}$ )	0.93W
Max. allowable load current ( $I_{\text{TEC-max}}/\text{A}$ )	1A
Max. allowable load voltage ( $V_{\text{TEC-max}}/\text{V}$ )	2V

#### Temperature Monitoring Module Characteristics

This detector uses a thermistor as a temperature monitoring module. The mapping between the resistance value and the temperature at the operating temperature is shown in the following table:

Temperature(°C)	Resistance (k Ω)	Temperature(°C)	Resistance (k Ω)
-65	94.270	-15	6.909
-60	69.290	-10	5.587
-55	51.500	-5	4.549
-50	38.700	0	3.729
-45	29.400	5	3.075
-40	22.560	10	2.55
-35	17.490	15	2.126
-30	13.690	20	1.782
-25	10.810	25	1.5
-20	8.608	30	1.268

The corresponding relationship between thermistor value and temperature is as follows:

$$\frac{1}{(T_1 + 273.15)} = \frac{\ln\left(\frac{R_1}{R_2}\right)}{B} + \frac{1}{(T_2 + 273.15)}$$

T1: Test target temperature, in ° C;

T2: Reference point temperature, in ° C. The typical value of reference temperature in the range of -20~70° C is 10 or 40° C. A reference temperature close to the target temperature should be selected.

R1: Thermistor resistance corresponding to T1, in k Ω ;

R2: Thermistor resistance corresponding to T2, in k Ω ;

B: Thermistor resistance corresponding to T2, in k Ω ;

B: Between 20 and 70 degrees, the typical B value is  $3019.6 \pm 60$ .

Note:

a) During TEC installation, please pay attention to the new resistance introduced by the external electrical structure. If the new resistance exceeds 10% of the TEC resistance, the I-V curve needs to be recalibrated.

b) It is recommended to open the TEC in a way that the connection resistance is small. If welding is required, short-circuit grounding protection is required, the welding temperature is  $\leq 250^{\circ}\text{C}$ , and the welding time is <10s;
